2F-LEUCHTEN
a globally unique lighting manufacturer

From the idea to the lamp – 15 crafts under one roof. There are no limits to the creative ideas of our architects and designers when it comes to lighting and production.

In the 2F workshop, time-honored craftsmanship meets modern, industrial methods. A combination that makes it possible to turn almost any design into reality.

Our skilled team offers a wide variety of trades: locksmiths, painters, carpenters, seamstresses, electrical engineers, mechanical engineers, lighting planners and designers. All kinds of specialists unite their skills to achieve a shared goal.

HERE WE ARE…

…WHERE WE WANT TO BE

As a manufacturer 2F-Leuchten is always reinventing itself. Every single model produced in the past or present is seen as an opportunity to redefine ourselves for a brighter future, and to reinterpret lighting solutions for modern applications. In every phase of our work we are prepared to take unexplored paths and create new ones. Our goal is the production of unique lights.
Our factory in Abtenau near Salzburg is rich in history and tradition, and added value for the region increases appreciation of our products.

Legend Colors

During the product development phase we articulate the specific attributes every luminaire should embody. In our in-house light lab we continually assess results, monitor progress, and ensure adherence to predefined specifications for both standard products and custom-built lights, crafted to meet individual requirements.

The dynamic and ever-evolving landscape of the LED sector necessitates a vigilant approach. We consistently stay abreast of rapid developments, scrutinizing cutting-edge components for their distinctive characteristics, seamlessly adapting them to project requirements, and meeting high-end specifications. The workshop integrated into our light lab is staffed with dedicated professionals. It ensures swift measurements, and facilitates the refinement of products with a high level of expertise. Our 2-axis goniometer enables comprehensive measurement of a light source's entire 3D distribution field, allowing us to generate extensive LDT and IES simulation files.

WE INFUSE EMOTION INTO THE LIGHT

While technology is of great significance for us as a manufacturer, it takes a secondary role for our customers, who simply need to switch lights on and off in everyday life. We design lighting solutions for real people, so we handle the emotions that electric lighting evokes with great care. For many thousands of years, humans were accustomed to the sun and fires as primary light sources. This evolutionary imprint wasn't erased by the invention of the light bulb 135 years ago.

Hans Buchegger

YOUR WHITE STAYS ON TREND

The art of light draws on the beauty of nature. Painters and sculptors only achieve beauty when their work approaches nature. The beauty of natural light is unparalleled, but tunable white technology enables us to reproduce the natural color changes of light throughout the day. Planning light for human well-being is the concept of Human Centric Lighting (HCL), and is reflected by our developments in the area of tunable white.

Natural light can be simulated indoors with dynamically and continuously adjustable color temperatures – from cool to warm white (2200 - 5000K). Light influences and enhances human emotions. Cool white light stimulates during the day, promoting concentration. Warm white light in the early morning, evening and during the night, calms, allows us to breathe, and encourages the body to regenerate.
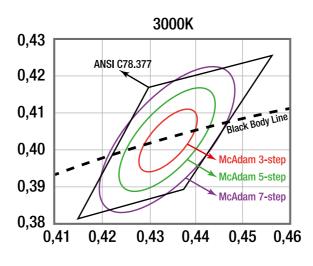

Tunable white technology allows both the color temperature and brightness of the light to be regulated and dimmed via DALI. Two channels (warm white/cool white) are controlled. 2F-Leuchten utilizes the new and intelligent DALI DT8 (Device Type 8) technology. This offers the significant advantage of requiring only 1 DALI address (instead of 2 addresses in DT6 operation). The operating/control devices in use can also be programmed to the "dim to warm" operating mode.

2200K	3500K	5000K

YOUR LIGHT - YOUR BINNING

The production of LEDs with batch-independent, consistent and stable photometric properties, is ensured by correspondingly narrow binning. Stable light quality, constant color temperature, color consistency, and a uniform and uninterrupted brightness level, are key evaluation criteria for binning. LEDs are sorted and classified accordingly. The MacAdam Ellipse, after David L. MacAdam, defines the scope in the CIE xy diagram around a reference hue in which the human eye cannot perceive any difference. Our high-quality products use branded LEDs from leading manufacturers with MacAdam (SDCM) 3-step binning.

YOUR LIGHT - YOUR CRI

CRI (Color Rendering Index), also known as CRI or Ra value, is a photometric quantity that makes the color reproduction of various light sources comparable. People are accustomed to seeing illuminated objects in their natural colors through incandescent lamps (with a CRI from - to 100). Therefore, the higher the CRI value of an artificial light source, the more natural the colors of the illuminated objects appear. The use of LEDs with CRI >90 is standard for 2F-Leuchten in the production of our spotlight and luminaire series.

CRI 70-80	CRI >90

DIVERSITY SIMPLE CONFIGURE

YOUR LIGHT YOUR CHOICE

Choose from our wide variety of lights and lighting systems by combining the desired properties offered by the options listed. For all freely-configurable products, all the selectable attributes can be found on the corresponding pages. These can be easily lined up in the intended sequence with the correct Item number for each desired product.

RON
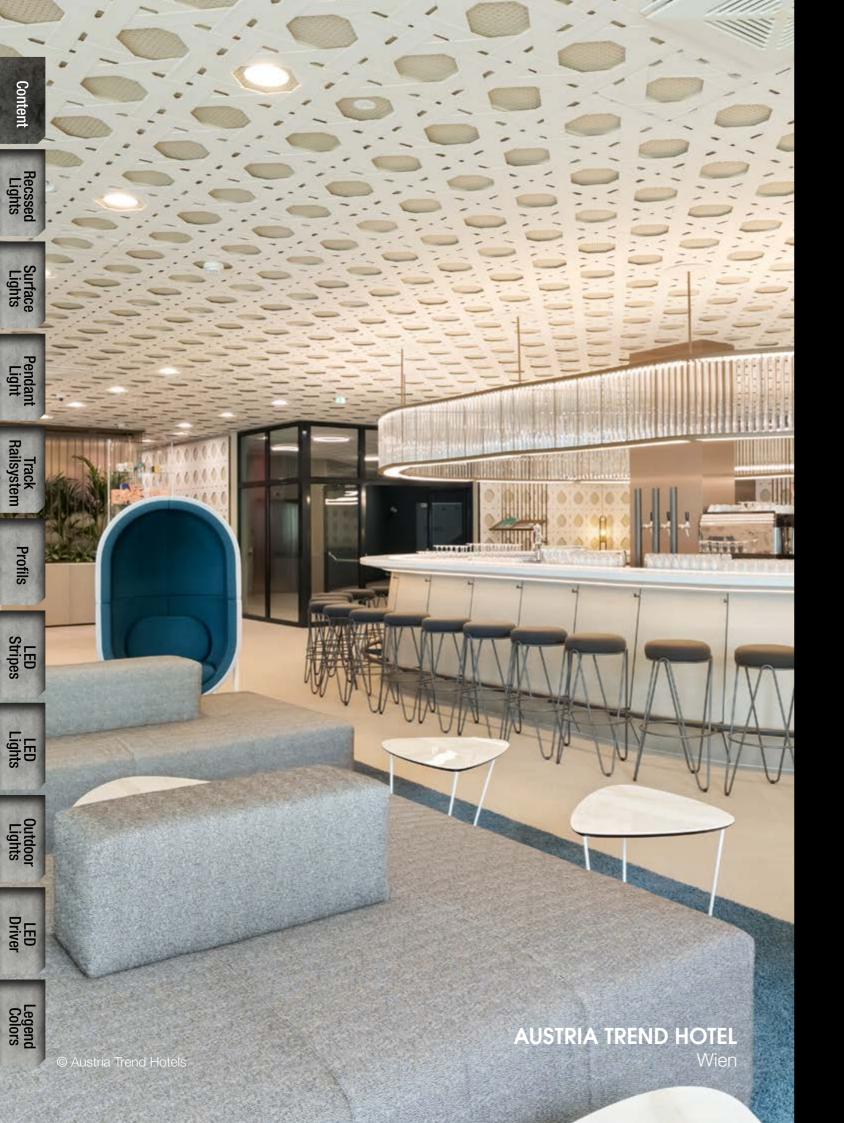

Characteristics, visual comfort, high performance and elegance all merge seamlessly into a consistently contemporary and harmonious fusion of form and function.

At the core of this integration are Bartenbach's patented, micro-faceted RMJ freeform reflectors. High efficiency, multiple reflections, and, simultaneously, highly precise light control, result in absolutely uniform light distribution and outstanding consistency, perfect longitudinal glare control, and exceptional color mixing quality in tunable white.

Superspot 2x14°, Spot 2x25°, Medium 2x35°, and Wide 2x45° are complemented by the flush-mounted, asymmetrical wall washer in the same form factor.

The reflectors are delivered with standard silver coating but can also be provided with gold coating upon request, catering to specific and special projects.

AUSTRIA TREND HOTEL
Wien

© Austria Trend Hotels

RJR

The RJR product series combines customer-specific requirements for functionality, efficiency, radiation characteristics, visual comfort, high performance and elegance in a continually modern fusion of form and function.

The heart of this connection is the patented, microfaceted RMJ free-form surface reflectors from Bartenbach. High efficiency, multiple over-irradiation coupled with highly precise light control, produces absolutely homogeneous light distribution and excellent uniformity, perfect longitudinal glare control, as well as supreme quality in the color mixing with tunable white.

Silver-coated reflectors are delivered as standard, but gold-coated are available upon request and for special projects.

SUURSTOFFI
Rotkreuz

RAY

Faceted, high-gloss surface with free-form surface technology of Bartenbach's patented RDB reflector covers the radiation area several times and enables excellent light distribution on the target surface (e.g. floor), as well as the highest quality color mixing within a reflector cell. Beam angles are permitted which, as wall washers, illuminate the wall surface homogeneously at a distance of around 1/5 of the wall height and, even when installed flush with the ceiling, distribute the light more or less right up to the ceiling. Thanks to pure secondary reflector technology, which prevents a direct view of the light source, the asymmetrical, microfaceted, thin-form reflectors ensure optimized longitudinal glare control with excellent uniformity, high efficiency, and guaranteed freedom from glare from all luminaire viewing angles. The result of the interaction of the high-quality components involves the use of wall washers for architectural surface lighting to immerse rooms in visual depth.

SUURSTOFFI
Rotkreuz

MIO MICRO REFLECTOR

Bartenbach's microfaceted free-form surface reflector was especially designed for 2F Leuchten and combines maximum efficiency with optimal longitudinal glare control, while also guaranteeing highly precise light control for absolutely homogeneous light distribution. With a light opening of just 50mm, MIO is extremely powerful – at up to over 800 lumens per light point. Despite the smallest structure, the dynamic powerhouse still appears reserved and sinks subtly into the spatial scenery. Developed for schools, company buildings and offices, retail, hotels and restaurants, and for projects with high demands on architectural and special lighting technology. The available beam angles are 2x25°, 2x35° with UGR values ≤19 and 2x45° (batwing distribution to achieve the largest possible luminaire spacing, such as for general traffic areas).

SUURSTOFFI
Rotkreuz

LEA

Innovative patented Bartenbach LFO lens optics ensure a puristic design language. The LFO lens focuses the light by reducing light emission to a minimum, concentrating it exclusively on the area to be illuminated. The result is an almost invisible, absolutely glare-free and comfortable, high-efficiency light source – and homogeneous color mixing with tunable white.

Design in the purest functionality for frameless lighting accents that merge with the building architecture. At a diameter of just 32mm, this powerful light brings over 660 lumens into the room. Narrow and wide light distribution with 2x20° and 2x38°, as well as the integration of the installation variants in plasterboard, metal, wood and acoustic ceilings, increase the range of applications greatly. Equipped with the same innovative lighting technology, the slim pendant lights are elegant and subtle, giving every room a special atmosphere.

SLOT

SLOT is a linear luminaire located behind – and shining through – a slot. The luminaire is linear in appearance. Individual points of light are not visible. The heart of the luminaire is a linear extrusion primary TIR lens with an exactly-positioned secondary lens. Slot is suitable for office workplaces (UGR < 19), thus requires longitudinal glare control. The primary optic provides transverse direction focus, the secondary optic longitudinal.

SLOT is a luminaire characterized by immaculate longitudinal glare control. At first glance, it is impossible to identify the light source. A special linear lens with longitudinal faceting enables light to be emitted through a gap just 10 mm wide. The ideal work task light also serves as a stylish luminaire in modern living spaces, and ideally complements our LEA-range of recessed luminaires. Bespoke lengths, surfaces, color temperatures and control units can be custom-produced for the project.

Choose between three different color temperatures with color rendering Ra >90, 2700K, 3000K, 4000K or tunable white. Lighting system consists of a light and control gear unit with a plug-in connection.

Developed for the high-end shop sector, hotels, restaurants and projects that place strict demands on lighting technology. RON-FA in a puristic design for frameless lighting accents that merge with the building architecture. Perfect for a variety of room heights, lobbies and hallways. The available beam angles 2x14°, 2x25°, 2x35°, 2x45° are rounded off by the ceiling-flush, same-size asymmetrical wall washer.

RJR PRO MAX

RJR high-output recessed spotlight, tiltable, surface white or matt-black. RAL color choice options. The microfaceted, free-form high-efficiency surface reflector ensures homogeneous light distribution and perfect longitudinal glare reduction due to multiple over-irradiation and high-precision light control. Three different color temperatures with color rendering Ra >90, 2700K, 3000K, 4000K, tunable white. Dim to warm. Lighting system consists of a light and control gear unit with a plug-in connection. Developed for the high-end shop sector, hotels, restaurants and projects that place strict demands on lighting technology. Perfect for a variety of room heights, lobbies and gear.

RAY

RAY recessed light-asymmetrical, 2-bulb, aluminum, surface white or matt-black. RAL color choice options. The asymmetrical, microfaceted free-form, high-efficiency surface reflector ensures optimized longitudinal glare control with excellent uniformity, as well as guaranteed freedom from glare from all luminaire viewing angles.

Choose between four different color temperatures with color rendering Ra >90, 2700K, 3000K, 4000K, tunable white with dynamic color temperature change and constant luminaire luminous flux 2200-5000K. Lighting system consists of a light and control gear unit with a plug-in connection.

Developed for wall washer lighting concepts in the hotel industry, in hallways and corridors, museums and galleries, as well as projects that place strict demands on lighting technology and visual comfort.

MIO

MIO recessed light, 16-bulb, aluminum, surface white or matt black. Additionally RAL color of your choice possible. The microfaceted free-form surface reflector, specially designed for 2F Leuchten, combines maximum efficiency with optimal longitudinal glare control, while at the same time highly precise light control for absolutely homogeneous light distribution.

Four different color temperatures with color rendering Ra >90, 2700K, 3000K, 4000K, tunable white with dynamic color temperature change with constant luminaire luminous flux 2200-5000K can be individually selected. Lighting system consisting of a light and control gear unit with plug-in connection.
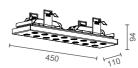

Developed for schools, company buildings & offices, retail, hotels and restaurants, as well as projects with high demands on architectural and special lighting technology. The available beam angles 2x25°, 2x35°, 2x45° (batwing to meet the requirement for the largest possible luminaire spacing, e.g. for general traffic areas).

LEA

LEA recessed spotlight, frameless, aluminum, surface white or matt-black. RAL color choice options. The innovative and patented Bartenbach LFO lens optics ensure a puristic design language. The LFO lens focuses the light through you to a minimum reduced light emission and concentrates it exclusively on the area to be illuminated. Maximum assembly convenience due to the innovative click-in function with spring-loaded ball pressure pieces.

The recessed design creates an almost invisible, highly efficient, completely glare-free and comfortable light source. Choose between three color tempera-tures with color rendering Ra >90, 2700K, 3000K, 4000K or tunable white. Luminaire without control gear (order separately).
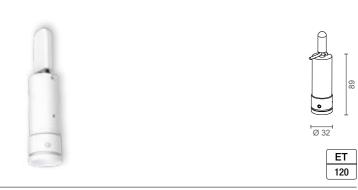

Developed for the hotel industry, catering industry and projects that place strict demands on lighting technology, visual comfort and room atmosphere. Design in the purest functionality for frameless lighting accents that merge with a building's architecture. Available in beam angles 2x20° and 2x38°.

RECESSED SPOTLIGHT

Recessed spotlight series in die-cast aluminum, IP20 & 54, surface white or matt-black, finely structured powder-coating.
Color temperature 2700K & 3000K with color rendering Ra >90. Lighting system consists of a light and control gear unit with a plug-in connection. The recessed light source guarantees excellent glare control and visual comfort. The increased IP protection rating means it can be used wherever dust and moisture protection are required.
Bathrooms, wellness areas, terraces, wet rooms, hallways, lobbies and living rooms, classical or modern – just a few examples of the variety of possibilities.

SLOT

SLOT is a luminaire characterized by immaculate longitudinal glare control. At first glance, it is impossible to identify the light source.

A special linear lens with longitudinal faceting enables light to be emitted through a gap just 10mm wide. The ideal work task light also serves as a stylish luminaire in modern living spaces, and ideally complements our LEA-range of recessed luminaires.

Bespoke lengths, surfaces, color temperatures and control units can be custom-produced for the project.

SLOT FLAT FRAMELESS

SLOT is a luminaire characterized by immaculate longitudinal glare control. At first glance, it is impossible to identify the light source.

A special linear lens with longitudinal faceting enables light to be emitted through a gap just 10mm wide. The ideal work task light also serves as a stylish luminaire in modern living spaces, and ideally complements our LEA-range of recessed luminaires.

Bespoke lengths, surfaces, color temperatures and control units can be custom-produced for the project.

RON

RON surface mounted or pendant luminaires, aluminum, surface white or matt-black. RAL color choice options. The microfaceted, highly-efficient free-form surface reflector ensures homogeneous light distribution and perfect longitudinal glare reduction due to multiple over-irradiation and high-precision light control.

Choose from three color temperatures with color rendering Ra >90, 2700K, 3000K, 4000K. Lighting system consists of a light and integrated control gear.

Developed for the high-end shop sector, hotels, restaurants and projects that place strict demands on lighting technology. Perfect for a variety of room heights, lobbies and hallways. Available in beam angles 2x14°, 2x25°, 2x35°, 2x45°.

RAY

RAY surface mounted luminaires, asymmetrical, 24-bulb, aluminium, surface white or matt black. RAL color choice options. The highly-efficient asymmetrical, microfaceted free-form surface reflector ensures optimized longitudinal glare control with excellent uniformity, as well as guaranteed freedom from glare from all luminaire viewing angles.

Choose between four color temperatures with color rendering Ra >90 at 2700K, 3000K, 4000K and Ra >80 for tunable white with dynamic color temperature change and constant luminaire luminous flux 2200-5000K. Lighting system consists of a light with integrated control gear unit.

Developed for wall washer lighting concepts in the hotel industry, in hallways and corridors, museums and galleries, as well as projects that place strict demands on lighting technology and visual comfort.

MIO

MIO surface mounted light, 2-bulb, aluminum, surface white or matt-black. RAL color choice options. The microfaceted free-form surface reflector designed by 2F Leuchten combines maximum efficiency with optimal longitudinal glare control and high-precision light control for absolutely homogeneous light distribution.

Choose from three color temperatures with color rendering Ra >90, 2700K, 3000K, 4000K. Lighting system consists of a light and control gear unit with a plug-in connection. Developed for schools, company buildings and offices, retail, hotels and restaurants, as well as projects that place strict demands on architectural and special lighting technology.

The available beam angles 2x25°, 2x35°, 2x45° (batwing to meet the requirement for the largest possible luminaire spacing, as for general traffic areas).

SURFACE LIGHTS

Surface mounted lights, die-cast aluminum, round or square, IP20, surface white or matt-black, finely structured powder-coating.
Color temperature 2700K with color rendering Ra >90. Luminaires with integrated control gear unit. Their simple shape and puristic design enable these surface mounted lights to blend discreetly into any building architecture. The increased IP protection rating means it can be used wherever dust and moisture protection are required.
Bathrooms, wellness areas, terraces, wet rooms, hallways, lobbies and living rooms, classical or modern – just a few examples of the variety of possibilities. Available with a beam angle of 45°.

JAR

JAR surface mounted lights are suitable for ceiling or wall mounting. Housing aluminum matt-white. The hand-blown triplex glass diffuser (opal glass layer between two crystal glass layers) refracts the light several times and scatters it evenly.
The high-end diffuser ensures homogeneous and glare-free light distribution with a direct/indirect component. Lighting system consists of a light with a 230V LED board. Choose from two color temperatures with color rendering Ra >90, 3000K as well as two diameters: 285mm and 385mm. Easy to install using a bayonet lock. Timeless design enables this lamp to be used in hallways, stairwells, storage rooms, living areas and classic large-area lighting applications, regardless of room and building architecture.

SLOT

SLOT is a luminaire characterized by immaculate longitudinal glare control. At first glance, it is impossible to identify the light source.
A special linear lens with longitudinal faceting enables light to be emitted through a gap just 10mm wide. The ideal work task light also serves as a stylish luminaire in modern living spaces.
Ideally complements our LEA-range of recessed luminaires.
Bespoke lengths, surfaces, color temperatures and control units can be custom-produced for the project.

TRACK EVO - 48V

TRACK SUSPENSION PROFILE

The Multisystem Evo STANDARD RAIL is a LOW VOLTAGE (SELV) 4-wire class III rail. The supply voltage must be between 0 and 60 V DC and the supply current must not exceed 15A.

The four rail conductors can be used to provide two separate supplies, or one circuit for the supply and one for the DATA BUS.

It is forbidden to use supply devices, drivers, DATA BUS systems and components not approved as SELV, and/or components with a U-OUT over 60V DC.

MIO - 48V

MIO track spotlight with DALI adapter, aluminum, surface white or matt-black. RAL color choice options. The microfaceted free-form surface reflector, specially designed for 2F Leuchten, combines maximum efficiency and optimal longitudinal glare control with high-precison light control for absolutely ho-mogeneous light distribution.

Choose from three color temperatures with color rendering Ra >90, 2700K, 3000K, 4000K. Lighting system consists of a light and rail adapter with integrated control gear.

Developed for schools, company buildings and offices, retail, hotels and restaurants, and projects that place strict demands on architectural and special lighting technology. The available beam angles 2x25°, 2x35°, 2x45° (batwing to meet the requirement for the largest possible luminaire spacing, as for general traffic areas).

HYR - 48V

The HYR zoomable spotlight series is a stylish and compact LED track and individual spotlight solution for a wide range of project applications. Ideal for museums, art, shops and corridors.
Its adjustable lens mechanism is designed to offer stepless settings from 11° to 50° FWHM.
The lamp head can be swiveled precisely, and rotated horizontally and vertically, so light is emitted exactly where it is needed.
Choose between two color temperatures with color rendering Ra >90, 2700K, 3000K.

MIO - 230V

MIO track spotlight with DALI adapter, aluminum, surface white or matt black. RAL color choice options. The microfaceted free-form surface reflector, specially designed for 2F Leuchten, combines maximum efficiency and optimal longitudinal glare control with high-precison light control for absolutely ho-mogeneous light distribution.

Choose between three different color temperatures with color rendering Ra >90, 2700K, 3000K, 4000K. Lighting system consists of a light and rail adapter with integrated control gear.

Developed for schools, company buildings and offices, retail, hotels and restaurants, and projects that place strict demands on architecture and special lighting technology. The available beam angles 2x25°, 2x35°, 2x45° (batwing to meet the requirement for the largest possible luminaire spacing, as for general traffic areas).

PROFILE YOUR LIGHT

Indirect lighting producing pleasant, soft light is a popular solution. Invisible linear light strips can be used to create atmospheric moods that give the room a completely new dimension.

One of the most popular forms of indirect lighting or accent lighting with LED strips and LED profiles is cove lighting, in which a linear LED light source is placed on a suitable metallic base for perfect heat management, directly in an LED profile made of high-quality aluminum, in recesses provided for this purpose, or strips and other architectural elements are installed. The light is hidden in the cove, creating even and diffuse light. Linear LED profile systems have long justified their place in the world of lighting, and have become indispensable for lighting plans.

Geometric and clear shapes, straight lines and aesthetics are the message of these product lines.

Our miniaturized profiles can be used excellently for furniture installations, Use wardrobes, bed backlights, cove lighting, display cabinets and much more.

Our slightly larger LED profiles, whose design is still reduced to a functional minimum, are used in almost all lighting solutions. Light lines in hallways and corridors, seminar rooms, offices and work rooms, as a surface mounted or recessed version or suspended directly or directly/indirectly.

PROFILES & ACCESSORIES

EXKL. LED STRIPES

High-quality LED profiles for installation and construction, anodized aluminum (with customized powder coating on request), and accessories. Covers in transparent or opal polycarbonate. Mounting rail for easy installation.
Matching LED strips with a detailed description in the chapter on LED strips.

LED SURFACE MOUNTED PROFILE

High-quality LED surface mounted profile, anodized aluminum (with customized powder coating on request), and accessories. The frosted polycarbonate cover, together with the 7W LED strip with a particularly small PCB width, ensures homogeneous light distribution. Our smallest available profile is ideal for lighting solutions with limited installation space, or when the light line should appear almost invisible.

LED SURFACE MOUNTED PROFILE

High-quality LED surface mounted profile, anodized aluminum (with customized powder coating on request), and accessories. Various covers are available in transparent, opal matt or frosted polycarbonate finishes, offering different levels of light transmission and can be used according to light planning needs.
The matching LED strips and opal matt cover combine to produce homogeneous light distribution. Transparent covers provide more light. This profile only has a minimal height, so it's ideal for lighting solutions with limited installation space.

LED SURFACE MOUNTED PROFILE

High-quality LED surface mounted profile with integrated cable routing, anodized aluminum (with customized powder coating on request), and accessories. Various covers are available in transparent, opal matt or frosted polycarbonate finishes, offering different levels of light transmission and can be used according to light planning needs. The extravagant, translucent, black cover is a special feature which is particularly used in projects demanding high standards of design and aesthetics. Together with the matching LED modules and opal matt or black cover, homogeneous light distribution is achieved. Transparent covers provide more light.

LED RECESSED PROFILE

High-quality LED surface mounted profile, for suspended installation, direct or indirect, anodized aluminum (with customized powder coating on request), and accessories. The various covers in frosted polycarbonate, microprismatic transparent or frosted finishes, offer different levels of light transmission and can be used according to light planning needs. Together with the matching LED modules for the direct light source, and the frosted covers, homogeneous light distribution is achieved. Microprismatic covers allow use in offices and at computer workstations.

LEDLINE IP 20

Flexible IP20 LED strips. Ultra-high efficiency, up to 120lm/W. Narrow McAdam2 binning, high light quality and color rendering RA >90, color temperatures 2700K, 3000K, tunable white 2200-5000K, RGBW 2700K, RGBW 3000K. Various PCB widths and capacities available. 3M adhesive tape for attachment, roll with 2m cable per page. Available as a 30-m roll or customized to requirements.
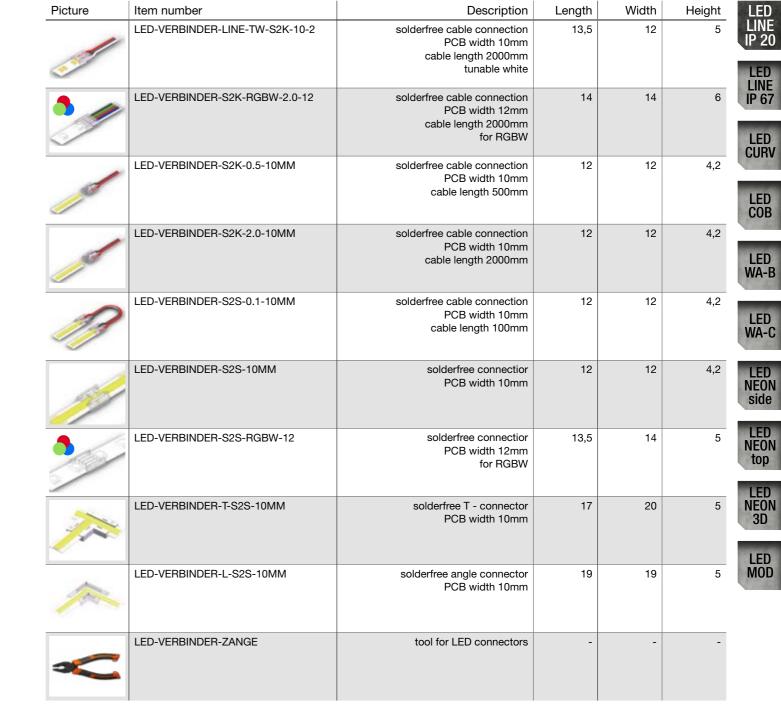

To extend service life and ensure perfect function, LED strips must always be mounted on heat-conducting material. We recommend combining them with our LED profiles.

LEDLINE IP 67

Flexible IP67 LED strips. Ultra high efficiency, up to 90lm/W. Narrow McAdam2binning, high light quality and color rendering RA >90, color temperatures 2700K, 3000K, RGBW 2700K, RGBW 3000K. Various PCB widths and capacities available. 3M adhesive tape for attachment, roll with 2m cable per page. Available as a 5-m roll or customized to requirements.

Please note, although the IP67 LED strips are protected from the effects of water, the ends (power feed points) must be installed and remain dry for safety reasons.

To extend the service life and ensure perfect function, LED strips must always be mounted on heat-conducting material. We recommend combining them with our LED profiles.

LEDCURV

Flexible curved LED strips offer a high level of flexibility and can be deformed up to a minimum bending radius (horizontal) of 30mm at 14W and 40mm at 18W.

IP20, ultra high efficiency, up to 110lm/W. Narrow McAdam2 binning, high light quality and color rendering RA >90, color temperatures 2700K, 3000K, choice of PCB widths and performances. 3M adhesive tape for attachment, roll with 2m cable per side. Available in 10m rolls or assembled to customer requirements. Predestined for use on rounded surfaces or for use in round lighting objects and lamps.

To extend service life and ensure perfect function, LED strips must always be mounted on heat-conducting material. We recommend combining them with our LED profiles.

LEDCOB

The flexible COB LED strip is an innovative new development. Individual LED dots are no longer visible on the LED strip. Instead the strip is seamlessly illuminated, narrow and easy to process. It also offers a high level of flexibility and can be deformed up to a minimum bending radius (vertical) of 60mm.

LEDCURVE can be installed directly in the viewing area as a narrow, continuous line of light, as there are no bright and annoying LED points. IP20, more than 80lm/W, high light quality and color rendering RA >90, tight McAdam2 binning, color temperatures 2700K, 3000K, 3M adhesive tape for attachment, roll with 2m cable per page.

Available in 30m rolls or assembled to customer requirements. To extend service life and ensure perfect function, LED strips must always be mounted on heat-conducting material. We recommend combining them with our LED profiles or heat-dissipating aluminum strips for visible installation.

LEDWA-C

Flexible modular LED wall washer for column lighting or curved architecture. Suitable for outdoor use (IP67) with high light quality and color rendering index (CRI) > 90. Optionally available in other light colors, with various beam angles of 20°, 30°, 40°, or oval 15x40°. Bending diameter of 200mm, maximum length of 2.40 meters per power cable.

LEDNEON - SIDE BEND

Flexible Neonflex LED strip, IP67, 40lm/W, high light quality and color rendering RA >90, color temperature 2700K, side bending, with a minimum bending radius (horizontal) of 40mm, on rolls of 20m, 30cm connection cable or assembled as required.

Ledneon has very good lighting stability, so lengths of up to 10m per feed can be achieved without drop down, as well as homogeneous illumination without visible, individual light points.

Please note, although Ledneon is protected from the effects of water, the ends (power feed points) must be installed and remain dry for safety reasons.

LEDMOD

Linear LED module LLE 24mm. Perfect light homogeneity, even when several LED modules are arranged in a row. Plug-in terminals for quick and easy wiring from LED module to LED module. Efficiency up to 173 lm/W, high color rendering RA >90 at 3000K and 4000K (2700K available on request), MacAdam3, tight luminous flux tolerances, ZHAGA-compliant. Power supply option in HE - High Efficiency or HO - High Output.

IP 00   CC   exkl.   120°   CE

Linear tunable white LED module, LLE G2 premium system, 24mm 1500lm, adjustable color temperature from 2700K to 6500K with constant luminous flux. Pre-calibrated to ensure light quality and color consistency. Consists of linear low profile DALI DT8 control gear and 2 to 6 LED modules (1500lm). Plug-in terminals for quick and easy wiring from LED module to LED module. Efficiency up to 112lm/W, high color rendering RA >90, McAdam3, excellent system color tolerance, dimming range 3-100% without changing the color temperature.

BATT

LED WET ROOM LIGHT

BATT wet room luminaire, housing and cover made of impact-resistant polycarbonate white (IK08). Batt is through-wired as standard, with connection options for strip-light installation. Luminaire comes with a built-in Tridonic DALI dimmable control gear unit. cable suspensions for suspended installation and mounting clips for ceiling or wall mounting are included in the scope of delivery. The color temperature can be individually adjusted to 3000K, 4000K (preset) or 5000K. BATT meets the requirements of functional lighting, is dustproof and offers protection from splashes/jets of water (IP65). For use in private and commercial halls, garages, workshops, cellars and ancillary rooms or for lighting escape routes.

| IP 65 | V 230 | ⏚ | ◐ | inkl. | DALI D | CE |

TBL

LED TUBE LIGHT

Versatile tube light with reflector and black back. End caps made of stainless steel, black powder-coated. The subtle red rubber seals make the lamp look even more unique. If necessary, luminous flux can also be increased. The lamp is delivered with a cable suspension set included. Can also be attached directly to the ceiling or wall. Its attractive appearance ensures a very diverse area of application.

WALL LAMPS

CARA & PACO

CARA & PACO wall lights, aluminum, IP65, surface white or black, finely-structured powder coating. Color temperature 2700K with color rendering Ra >90. Luminaire with integrated control gear unit. The luminaires have a very purist design with a particularly impressive lighting effect. The desired beam angle can be individually adjusted for direct or indirect radiance. Subtle and stylish effects can be achieved using Up&Down technology, on external facades, but also indoors. Restaurants, bars, hallways, lobbies and wellness areas are just a few examples of the diversity of possible uses. The increased IP protection rating means it can be used wherever dust and moisture protection are required.

OUTDOOR LAMP

SPIKE

Focus SPIK is an IP65 24-volt focusable indoor and outdoor spotlight.
Several spotlights can be supplied with one 24-volt DC driver. The spotlight can be dimmed with a DALI driver (not included).
The adjustable lens enables the beam angle to be focused between 15 and 40 degrees.
Ideal for illuminating trees, plants, facades and any other indoor and outdoor objects.
Focus Spike is supplied with a ground spike, but can also be screwed to other surfaces.
This product is also characterized by high CRI>90 and optimum glare control.

POWER SUPPLY DALI dimmable, tunable white DT8, constant voltage 24V, 230V AC, with strain relief

Item number	Power	L	B	H	mA	Dimmable
LEG-T0312-75W-24V-DT8	75W	292	43	30	-	DALI DT8
LEG-T0312-100W-24V-DT8	100W	292	43	30	-	DALI DT8
LEG-T0312-150W-24V-DT8	150W	352	43	30	-	DALI DT8

LEG-T0261-50W-2250-_ _ _ _mA

LED driver tunable white DALI dimmable, 2200-5000K, DT8, constant current of 150-1400mA each 21mA programmable at the factory, 230V AC, with strain relief

ATTENTION: Specify mA when ordering

Item number	Power	L	B	H	mA	Dimmable
LEG-T0261-50W-2250-XXXXmA	50W	184	41	30	150-1400mA	DALI DT8

CASAMBI DIMMABLE

LEG-K0057-CA

POWER SUPPLY Casambi controlled, constant voltage 24V, 230V AC, with strain relief

Item number	Power	L	B	H	mA	Dimmable
LEG-K0057-CA-35W	35W	195	43	30	-	Casambi
LEG-K0057-CA-60W	60W	225	43	30	-	Casambi
LEG-K0057-CA-100W	100W	295	43	30	-	Casambi
LEG-K0057-CA-150W	150W	325	43	30	-	Casambi

## LEG-T0331-_ _ _ _mA

LED driver Casambi controlled, 15 and 25 watts, constant current of 150-1050mA in 1mA steps programmable at the factory, 230V AC, with strain relief.

Item number	Voltage	Power	L	B	H	mA	Dimmable
LEG-T0331-15W-XXXXmA	10-54 V	15W	150	43	22	150 - 1050	Casambi
LEG-T0331-25W-XXXXmA	10-54 V	25W	150	43	22	180 - 700	Casambi

CASAMBI SWITCH

Z611-VD220WCM

Mpress is a wireless and battery-free switch with one or more buttons that can be linked to a Casambi network. Mpress can withstand 100,000 pressures and has a range of up to 15m under ideal indoor conditions.

Mpress does not require power or wiring to send control signals to selected lights. MPRESS buttons can be used and configured with both Android and iOS devices via the Casambi application. Pairing with networks using iOS requires at least version iOS13, which is now standard on all modern devices.

NOT DIMMABLE CC

LEG-T0209-500-V1

LED driver not dimmable, constant current; 230V AC, with strain relief

Item number	Power	L	B	H	mA	Dimmable
LEG-T0209-500-V1	1,4-3,5W	65	29	18	500	not dimmable

LEG-T0209-700-V1

LED driver not dimmable, constant current; 230VAC,
with strain relief

Item number	Power	L	B	H	mA	Dimmable
LEG-T0209-700	4W	86	33	22	700	not dimmable

LEG-T0021

LED driver not dimmable, constant current 230V AC

Item number	Voltage	Power	L	B	H	mA	Dimmable
LEG-T0021-500-V1	2,5 - 7V	1x3W	58	29	21	500	not dimmable
LEG-T0021-700-V1	2,5-4,5V	1x3W	52	26	21	700	not dimmable

NOT DIMMABLE CV

LEG-T0211

POWER SUPPLY not dimmable, constant voltage 24V, 230V AC,
with strain relief

Item number	Power	L	B	H	mA	Dimmable
LEG-T0211-35	35W	142	43	30	-	not dimmable
LEG-T0211-60	60W	225	43	30	-	not dimmable
LEG-T0211-100	100W	295	43	30	-	not dimmable
LEG-T0211-200	200W	325	43	30	-	not dimmable

MOTION DETECTOR

LEG-0030

Motion detection sensor for LED channel 24V DC, 3A output current, top and bottom soldering pads, without touch

Item number	L	B	H	mA	fade in & out

KEY / PICTOGRAMS

IP

The IP code is defined in accordance with IEC 529, EN 60529, DIN VDE 0470-1 and NF C 20-010 and indicates the degree of protection from foreign bodies, contact and water provided by housing and covers.

1st digit	Protection from foreign bodies and contact	2nd digit	Protection from water
0	No protection	0	No protection
1	Protected from solid foreign objects with a diameter of 50mm. Protected from contact with the back of the hand.	1	Protection from dripping water
2	Protected from solid foreign objects with a diameter of 12.5mm. Protected from contact with fingers.	2	Protection from dripping deflected 15° from the vertical
3	Protected from solid foreign bodies with a diameter of 2.5mm. Protected from access with tools.	3	Protection from water spray deflected 60° from the vertical
4	Protected from solid foreign objects with a diameter of 1.0mm. Protected from access with a wire.	4	Protection from splashing water on all sides
5	Protected from harmful quantities of dust. Complete protection from contact.	5	Protection low-pressure water jets/nozzles from any angle
6	Dust-tight. Complete protection from contact.	6	Protection from strong water jets from any angle
		7	Protection from temporary submersion
		8	Protection from permanent submersion

Symbol	Meaning	Description
	Protection class 1	Devices with protective conductor. When operating the luminaire or the electrical device, all metal parts of the luminaire that can be touched, and that may become live in the event of a fault, must be conductively connected to the protective conductor connection (green-yellow) in order to discharge the residual current. "Schuko plug"
	Protection class 2	Devices with protective insulation. When operating the light or electrical device, protection must be provided by protective insulation in the event of contact, and all live parts must have extra insulation in addition to the operating insulation (each strand insulated, all strands additionally sheathed), a protective conductor can be dispensed with, connection of portable devices such as use of a "Euro plug".
	Protection class 3	Devices with safety extra-low voltage. Electrical appliances with a low voltage supply (< 50V) generated by a protective transformer or batteries/rechargeable batteries/solar energy. No protective earth conductor may be connected to these. IP-CODES according to DIN EN 60529/ISO 20653 standard.

Symbol	Description
CE	The CE marking symbolizes the conformity of the product with the applicable requirements places on the manufacturer by the European Community.
	The ENEC mark (European Norms Electrical Certification) is a European test mark and confirms that the appliance on which this symbol is affixed fulfils all ENEC test requirements.
ROHS	RoHS - Restriction of the use of certain Hazardous Substances in electrical and electronic equipment: summarises the EC Directive 2002/95/EC on the prohibition of certain substances in the manufacture and processing of electrical and electronic equipment and components.
M / M	Suitable for installation on, or in, furniture made of materials with unknown flammability properties.
120°	Symbol for temperature-protected devices. The temperature indication shows the maximum surface temperature in the event of a fault.
SELV	Safety Extra Low Voltage

Symbol	Description
	Short-circuit-proof with safety insulation
T	Leading edge / trailing edge dimmable
D	DALI stands for "Digital Addressable Lighting Interface" and is a protocol for the standardized digital control gear interface in accordance with the IEC 62386 standard
Casambi	Casambi wireless lighting control solution
0	Non-dimmable
EL	AC or DC emergency lighting control gear or emergency lighting LED control gear
	Independent control gear for use outside luminaires without additional covering
EAC	Eurasian Conformity: Certification mark for CU countries (Russia, Kazakhstan, Belarus)

Symbol	Description	Symbol	Description
inkl.	POWER SUPPLY included		Suitable for ceiling mounting
exkl.	POWER SUPPLY not included (order separately)		Suitable for wall mounting
KSQ	KSQ / constant current source included		Suitable for ceiling and wall mounting
KSQ	KSQ / constant current source not included (order separately)	00m	Roll length in meters
V 00	Operating voltage in volts	Watt m	Watts per meters
V 24 or CC/max 700mA	Operating voltage 24 Volt or constant current max 700mA	CCT	Correlated color temperature
Vf	Forward voltage with serial cabling	CRI >	Color rendering index/color rendering
CC	Constant Current	lm/m	Lumen per meter
Ø 00 / 00x00	Ceiling cut-out in millimeters	LED's ▫ m ▫	Number of LEDs per meter
00	Slot depth / wall/ceiling cut-out in millimeters	PCB mm	Printed circuit board, width of carrier tape in millimeters
ET 00	Installation depth in millimeters	Pitch ▫mm▫	Pitch/distance between LEDs in millimeters
00	Ceiling thickness in millimeters	mm	Shortenability in millimeters
00°	Tiltable range in degrees	max. m	Maximum length in meters per feed-in point
00°	Rotatability in degrees	mm	Bending radius in millimeters
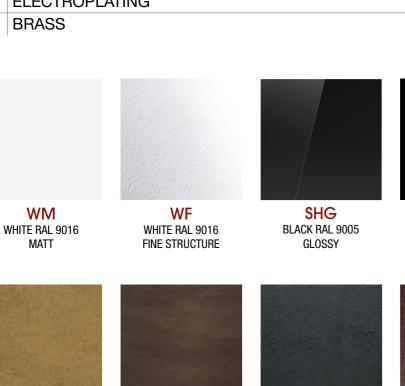

YOUR COLOR YOUR CHOICE

1	HAND FINISHING
